日本国際メディカルサポート

# Greetings

The Nakanoshima Qross was inaugurated in Nakanoshima, Osaka on June 29th, 2024. The Nakanoshima Qross is a place where clinical practice and research cross over in order to disseminate and promote Japan's excellent and highly advanced medical care to the world. We hope to use the Nakanoshima Qross as a core for disseminating advanced medical care in Osaka, Kansai and Japan to the world.

Global Medical Support Japan (GMSJ) is an organization that introduces advanced Japanese medical services such as various health-checks, medical examinations and treatments to people from overseas who come to Japan. It also plans to cooperate in the overseas dissemination of them. GMSJ would also like to play a part in the medical supply system at Expo 2025 Osaka-Kansai, by matching healthcare services to the many overseas visitors. Following those objectives, we hope that the Nakanoshima Qross and GMSJ can collaborate to contribute to the Japanese Global Medicine.

We would be grateful for your understanding and support.

Special Advisor,  
Yoshiki SAWA

(Chairman, Organization for  
Advanced Healthcare  
Innovation)

Global Medical Support Japan was established in the Nakanoshima Qross in August, 2024. With the advice of Advisor SAWA, Advisor NAKAMURA, the board members and other people related to medical care, as well as government and academic societies, the organization started its activities with the goals of promoting advanced Japanese medicine overseas and matching medical care to international people.

Hereafter, we will promote our work to match high-quality medical services to people from overseas in cooperation with various medical institutions, as well as with the Nakanoshima Qross and the Osaka Convention & Tourism Bureau. We also hope to play a part in providing medical services to the large number of overseas visitors expected to come to Osaka and the Kansai region after the Expo and the subsequent opening of the IR.

As this is a first attempt for our organization, which is unprecedented in Japan, we would appreciate your understanding and cooperation.

Chief Director,  
Yusuke SARAYA
